

Maximizing Your Cost-Savings

Do I Really Have A Choice?

Choices are good, right? Then why do most heating suppliers only offer inefficient heating solutions? **We are the only heating and fuel provider who WANTS YOU TO SAVE MONEY!**

We are here to help you identify what your options are, and help you understand how your heater and fuel choices can affect your total heating, consumption and labour cost. The most important question you are going to ask yourself is *how much money do I want to save this season on heating?*

4 Things To Consider When Assessing Your Heating Budget

1. How much do I want to spend in total on heaters, fuel and labour?

Our top priority is to ensure the solutions we recommend to you are within your budget. Have you budgeted for, or considered your costs for heating equipment, fuel and labour?

2. How much of my budget do I want to spend on heaters versus fuel?

Unless you have a short-term project, fuel will be a far greater cost than your heater rentals during a winter project. Lower efficiency heaters may provide lower upfront costs at first, but the fuel consumption savings of a high efficiency solution will provide greater savings on your overall heating costs.

3. How important is labour time and cost to me?

Do not underestimate the labour costs associated with moving heaters, set up, and power requirements. Choosing the right fuel for your specific application can have a tremendous impact on the labour required to refuel your heaters.

4. Am I missing opportunities to save money with a more efficient solution?

Before signing the dotted line, consider all of the solutions available to you. There are often cost-savings to be had by choosing the right fuel, heater and heating partner, for your project. Read on to find out how to find those savings.
