CLIMATE CONTROL

ControlPro
REMOTE CONTROL & CLIMATE MONITORING

ControlPro by *EXACT Technology*

Stephenson's has partnered with EXACT Technology to develop a climate control solution for managing and monitoring construction heaters 100% remotely.

CHECK YOUR HEATERS FROM ANYWHERE

Monitor the status of your heaters and site conditions through an online dashboard in EasyLink. Giving you a clear view of what's happening on site without having to be there.

CONTROL OF HEATING SET UP REMOTELY

Adjust your heat settings without making a trip to the jobsite. Turn connected heaters on or off and adjust temperatures remotely. ControlPro puts control of your temporary heating setup right at your fingertips.

GET ALERTS WHEN CONDITIONS CHANGE

Stay ahead of temperature shifts with automated alerts. Set notifications to alert you when temperatures change. With timely information, you can respond quickly and maintain the conditions your project requires.

ControlPro units are compatible with remote sensors for extended monitoring capabilities.

HOW IT WORKS

POWER CONNECTION
ControlPro uses a standard 120V connection or can be powered directly by the heater on compatible heaters.

THERMOSTAT CONNECTION
ControlPro replaces the traditional heater thermostat, allowing you to adjust and control the unit remotely.

HEATER TEMPERATURE
A dedicated temperature probe monitors the heater's output.

AMBIENT CONDITIONS
An ambient temperature probe monitors temperature and humidity in the surrounding space.

STATUS AT A GLANCE
Indicator lights provide a quick visual reference of the ControlPro unit's status.
